WHAT I BUILD

01

AI-assisted code review at enterprise scale

Designed and rolled out AI PR reviews across Azure DevOps and GitHub Copilot. Schema-validated output, severity gating, advisory-to-enforced rollout, kill-switch controls, per-review cost telemetry. Hundreds of production repositories · thousands of reviews per month.

02

AI tooling for DevOps support

Unified support toolkit (CLI + REST API), VS Code chat participant, Atlassian assistant, JIRA task/epic automation, Kafka AI deployment workflow. Disk, logs, services, deployment, and runbook triage live in the developer workspace - with safe two-step flows for live actions.

03

Migration & operational automation

Production-grade Azure DevOps to GitHub migration platform - open source, enterprise-scale. Playwright + local vision-model automation of a ~3,400-game casino catalog: metadata extraction and uptime checks, est. 5-7 person-weeks per refresh collapsed to 2-3 days unattended.

04

AI products & quality engineering

PowerMeter, ShotKit, Frenchie Trivia - consumer apps live on App Store, Google Play, and the open web with CI quality gates via Playwright. Test strategy, fast feedback gates, and device/browser coverage rooted in years of SDET / Senior SQA work.

SELECTED IMPACT

- ↳ **AI PR review rollout** across hundreds of production-relevant repositories. Thousands of AI-backed reviews per month with full-scope monthly cost in the low hundreds of dollars.
- ↳ **Thousands of developer-hours saved annually** from mechanical pre-triage alone - independent of avoided rework or production incidents.
- ↳ **Schema-validated, severity-gated** reviewer with kill-switch and per-repo opt-in. Advisory-to-enforced rollout pattern reusable across both Azure DevOps and GitHub.
- ↳ **JIRA task & epic automation** - structured creation, transitions, linking, and bulk updates across saved filters.
- ↳ **Observability & root-cause** with Dynatrace, ELK, Grafana - alerting into Teams; multi-hour RCAs resolved in minutes.
- ↳ **Build & release hardening** - K8s build agents, custom Dockerfiles, modular CI/CD, secure approval gates introduced where none existed.
- ↳ **Security & quality gates** - approved secret stores, SonarQube wired to branch policies, OWASP-aligned test design.
- ↳ **Live consumer AI products** on iOS, Android, web with CI quality gates (Playwright + Maestro).
- ↳ **Open-source ADO → GitHub migration platform** - idempotent, auditable, reversible.

RECENT CASE STUDIES

ENTERPRISE

AI PR reviews on Azure DevOps

Schema-validated, build-pipeline-native, governance-first.

ENTERPRISE

DevOps support toolkit

CLI + API for health, deployment, logs, and runbooks.

OPEN SOURCE

ADO → GitHub migration platform

Inventory, freeze, mirror, parity proof, audit trail.

ENTERPRISE

Atlassian assistant

Wiki + ticket search and JIRA write automation, per-user tokens.

STACK SNAPSHOT

PYTHON • POWERSHELL • C# • AZURE DEVOPS •
GITHUB ACTIONS • KUBERNETES • DOCKER • ARGOCO •
OPENSHIFT • HELM • TERRAFORM • ANSIBLE •
HASHICORP VAULT • KAFKA • DYNATRACE • SONARQUBE
• PLAYWRIGHT • MAESTRO • JIRA • CONFLUENCE •
POWER AUTOMATE • N8N • CLAUDE / OPENAI APIS •
ELEVENLABS / HEYGEN APIS

Thank you for taking the time to read through this - I genuinely appreciate it. I'd welcome a conversation about how my experience could fit your team.
